

## What is Sustainability?

Sustainability means different things to different businesses. For some, it means developing a program because "it is the right thing to do." For others, it may increase their brand recognition or help them gain market share against a strong competitor. Some see sustainability as a tool to achieve cost savings through better performance, continuous improvement, saving on energy costs and adding money to the bottom line. Whatever your reason may be,

Endpoint Solutions has the experts and the tools to meet your needs.

Endpoint Solutions works with your company to define what sustainability means to you, determine your current baseline, and facilitate development of a program that meets your overall goals. Our initial assessment tool is used to gauge your awareness of sustainable business practices in terms of environmental, social and economic considerations. Our environmental, health and safety advisors and environmental

scientists have expertise in manufacturing that enables them to understand your concerns and guide you towards developing a profitable and sustainable workplace. Environmental advisory services include green manufacturing practices, pollution prevention, environmental management system development, greenhouse gas emissions and energy conservation practices.

## Sustainability Services include:

- Sustainability baseline assessment
- Corporate sustainability strategy
- Management system development and implementation (ISO 14001, OHSAS 18001)
- Management system audits (internal or 3rd party)
- Corporate greenhouse gas protocol/ program planning and development
- Greenhouse gas emission inventory

## Other Services include:

- Phase I and II environmental site assessments
- Environmental, health and safety compliance audits
- Corporate energy reduction initiatives
- Environmental, health and safety permits and plans

## **Sustainable Concepts**

The United States Environmental Protection Agency (USEPA) defines sustainable activities as those meeting the needs of the present without compromising the need of future generations, while minimizing overall burdens to society. Endpoint Solutions' professionals evaluate sustainable considerations for each of their project endeavors. This common sense approach not only lessens the burden on the environment, but can also reduce overall costs of our projects.

## **Case Studies**

### **Former Frost Site, Kenosha, WI**

Working directly with City engineering staff, Endpoint coordinated the remediation of a manufacturing site with construction of a City storm water detention pond. The sustainable approach included hauling clean excavation spoils during the construction phase of the storm water detention pond to the remediation site as backfill. This process resulted in overall savings of approximately \$200,000 to the City.

### **Global Manufacturing Company**

As an executive level decision-maker for a major manufacturing company, Gary Fahl developed, planned and implemented sustainable global environmental and safety strategies in Europe, Asia, North America and South America. These strategies included annual goal-setting and periodic reviews with executive management

that resulted in continuous, measurable improvements to the triple bottom line.

Improvements included cost savings, energy reductions, waste elimination, zero wastewater discharge, and inclusion on the Domini Index for socially responsible companies for five consecutive years.

### **Multiple Worldwide Industries**

Our staff has assisted clients within a wide range of industries to develop effective sustainability strategies, ISO 14001/OHSAS 18001 programs, and greenhouse gas emissions protocols and inventories at their facilities. These strategies enabled the clients to enhance their standing in the local communities, reduce their impact on the environment, and realize annual cost savings.
